

Process mining is the activity of **discovering**, **monitoring** and **improving** processes as they really are, by extracting knowledge from event logs available in today's information systems.

It helps you to **visualize** your process flows and all its variants based on actual data. This helps you get a clear overview and forms the basis for detecting **bottlenecks** and **improvement opportunities**.

It provides the following **benefits**:

- Process Understanding
- Process Improvement
- Root Cause Analysis
- Compliance and Risk Management
- Performance monitoring
- Data-Driven Decision Making
- Continuous Improvement

Overall, process mining empowers organizations with **actionable insights** to optimize their processes, enhance operational performance, and achieve better outcomes.
