Organizational Excellence & **Transformation** 

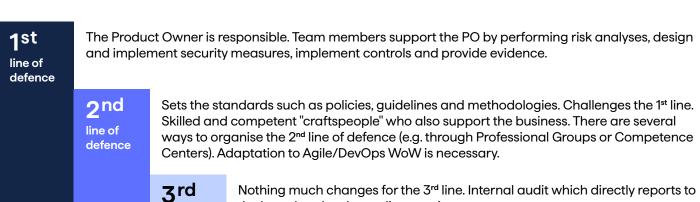

# The basics

Risk focusses on control of a process, situation or change; this requires knowing in advance what will be changed.

### 2. 3L(OD) model is a key first step: Agile/DevOps teams are responsible for risk

line of

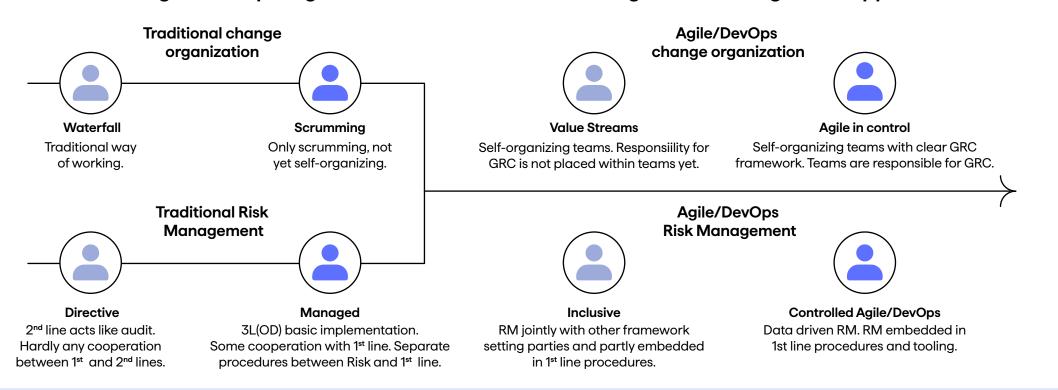

the board and to the audit committee.

#### 3. Risk Management culture: The role of Risk and Compliance needs to change

# Growth in maturity

4. A mature Agile/ Devops organization needs a mature and Agile Risk Management approach

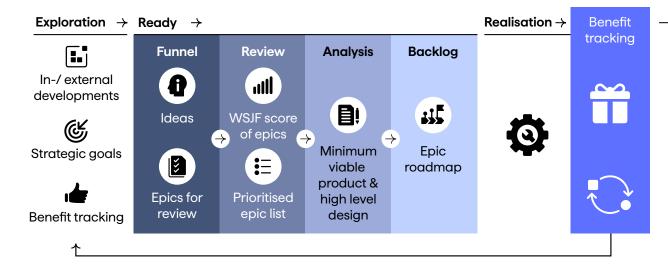

## 5. Growth in maturity is needed on the following topics

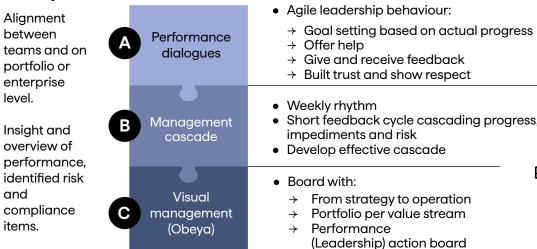

- Requirements at a late
- A separate tooling/committe per risk area and 1st line area
- Risk = Directive
- Generic requirements on paper in policies
- Demonstrating control after changes is mostly
- Well in advance
- Integrated approach for all framework setting parties (1st and 2nd line)
- Risk = Supportive
- Specific searchable requirements in tool
- Continuously demonstrable in control

# Embed in processes

6. Involvement of Risk and Compliance early in the ready phase prevents rework later

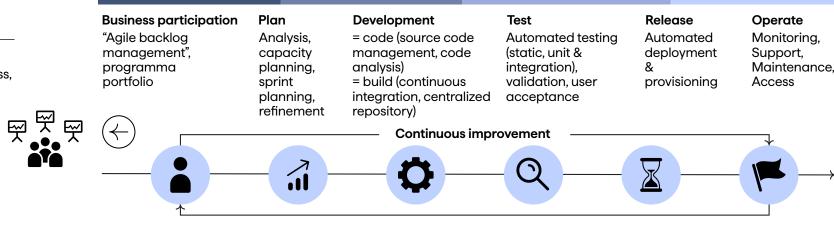

#### 7. Volg de voortgang via Obeya: Visualiseer, inspecteer en pas aan

→ Organization health check

8. Use the Agile/ Devops delivery process to be in control
