Shape the future with clarity & purpose

Learn more

In today’s fast-paced environment, leaders face complex challenges that demand fresh perspectives and clear purpose. Our Value Creation Plan is designed to simplify complexity, identify key value drivers, and enable you to drive focused, measurable impact.

Our approach ensures value creation in four steps:

I. Target Dimensions

Which is the leading value dimension for your company? How can vision and purpose be derived from these different value dimensions?...

II. Value Drivers

What are the drivers that ensure the success of your company? How do you quantify their impact?...

III. Value Levers

What are the right business models to focus on? How can you scale them? Which actions need to be realized to drive your business? How can AI help?...

IV. Impact Delivery

How can you orchestrate and measure your value creation? How can you truly empower your actions and measure whether you're doing it right?...

Project phases from strategy to execution:

Phase 1	Duration: 1-2 weeks	Through a collaborative CxO workshop for each value creation step, we co-create an actionable 80% target vision for your value creation program.
Phase 2	Duration: 3-6 months	We progress through the four steps of value creation – target dimensions, value drivers, value levers, and impact delivery – achieving tangible outputs at each stage.
Phase 3	Duration: individual	Together, we execute the relevant value levers, transforming actions into measurable impact by leveraging the integrated Eraneos service portfolio.

Value driver tree (illustrative)

Based on your prioritized value dimensions, we develop a driver tree with the elements that directly impact your business success.
